

Feature Request 1: Undo Game Move

Description:

- If you make a move, you regret you can have an option to undo. This feature lets you reverse your last action within a limited time, keeping everything fair and strategic.

Expected Impact:

- These features are all about giving a player more control and fun in their gameplay. The 'Undo Game Move' is perfect for those moments when you just need a second chance. They might mistakenly place a disc. This ensures everyone has fair shot at this game. This will encourage player to play the entire game even if they make a mistake rather than rage quitting.

Implementation/Suggestions:

- Add an "Undo" button next to the place disc button.
- Undo button will be clickable after a player places a disc
- After 5 seconds, the button will be disabled until a player plays a move again
- When a player does an undo, the disc will be removed from the board
- Right after "Undo" is pressed, the disc will be removed from the board, and a message will be displayed indicating that a player has undone a move.
- A catch is that a player can only undo one time per move within the 5 second frame.

Feature Request 2: Select Fruit (Color)

Description:

- Players can choose their favorite fruit-themed disc to use during the game, adding a personalized touch to each game session. This feature ensures each player's disc is distinctively colored to avoid confusion and maintain game integrity. However, both players cannot choose the same fruit color to ensure clear differentiation during play.

Expected Impact:

- The 'Select Fruit (Color)' feature enhances the visual appeal and personalization of the game. It allows players to connect more with the game by selecting a fruit (disc) that they prefer, making the game setup more enjoyable and visually engaging.

Implementation/Suggestions:

- At the start of each game, players will be presented with a menu featuring a vibrant selection of fruits and their associated colors.
- The selection system must ensure that no two players can choose the same fruit color.
- Once a fruit color is selected by one player, it should be disabled or removed from the other player's options for that session.
