

Feature Request: Forfeit Option for Tic-Tac-Toe and Connect 4

- Description: Implement a forfeit option that allows players to surrender a game of Tic-Tac-Toe or Connect 4 if they no longer wish to continue. This option should be easily accessible during gameplay and ensure that the opponent is notified of the forfeit result.

- Expected Impact: This feature will provide players with a way to exit games gracefully rather than leaving them unfinished. It improves the user experience by preventing unnecessary delays when a player wants to concede. Additionally, it helps in ranking-based systems by properly registering the outcome of a forfeited game.

- Implementation/Suggestions:

- Add a "Forfeit" button in the game interface, allowing players to voluntarily surrender the match.
- Upon forfeiting, display a confirmation prompt to prevent accidental forfeits.
- When a player forfeits, the opponent is automatically declared the winner, and the match result is recorded accordingly.
- Notify both players when a forfeit occurs, displaying a message such as "Player X has forfeited the game. Player Y wins!"
- In rankings, ensure forfeits are properly accounted for in win/loss records.
