

Use Case: User Registration

Iteration: 1

Primary Actor(s): New User

Goal in Context: Enable a new user to create an account in the platform.

Trigger: The user selects the option “sign up” or “Create an account” option in the software.

Preconditions: the user must be new, cannot have an existing registered account.

Scenario:

1. The user goes to the registration page.
2. The user enters required information, such as username, email, and password.
3. The system then verifies the provided information whether all required fields are filled and its correct.
4. If the entered information is successful, then the System creates a new user account.
5. Then the user gets a confirmation email.

Postconditions: Once the account is successfully created and verified, the user gains access to log in and utilize system services.

Exceptions:

1. If the email entered is already registered, then the system notifies the user and prevents duplicate registration.
2. if the entered credentials do not meet format requirements, an error message is displayed, prompting the user to correct them and resubmit again.

Priority: High

When available: Iteration 1

Frequency of use: One time per user,(At the very beginning)

Channel to actor: when user clicks the “Sign Up” or "Create an account" option.

Channels to secondary actors: N/A

Open issues: N/A

Use Case: User Login

Iteration: 1

Primary Actor(s): Registered User

Goal in Context: Authenticates a registered user, granting access to the system's features.

Trigger: the user selects the "Login" option.

Preconditions: The user must have a registered account.

Scenario:

1. The user goes to the login page.
2. The user enters their credentials to login (username and password).
3. The system checks the provided credentials against the stored records.
4. If the Authentication is successful, the System grants access to the user account.

Postconditions: Once the login is successful, the user is redirected to their personalized dashboard, where they can access available games, view rankings, and track game history.

Exceptions:

1. If the user enters incorrect login credentials, an error message is displayed, prompting them to try again.
2. If multiple unsuccessful login attempts occur, the system may temporarily lock the account for security reasons.

Priority: High

When available: Iteration 1

Frequency of use: Often

Channel to actor: The user enters their login credentials (ID and password) and clicks the "Login" button.

Channels to secondary actors: N/A

Open issues: N/A
