

Authentication & Profile Team - Planning Document

Project: Online Multiplayer Board Game Platform (OMG)

Course: SENG300 - Introduction to Software Engineering

Project Scope & Responsibilities

The Authentication & Profile team is tasked with handling user authentication, registration, and profile management. Key responsibilities include:

- Secure login and registration system
- User profile creation and management
- Storing and displaying user game history and rankings
- API development for authentication services
- Integration with other teams

Project Timeline

Week 1: Use Case Diagrams & Dummy Functions

- Develop use case diagrams and descriptions outlining authentication and profile management workflows
- Identify key user interactions and system processes
- Implement basic dummy functions for authentication and profile features to define system behavior

Week 2: Class & Sequence Diagrams

- Refine and finalize the use case diagrams
- Develop the class structure based on the finalized use cases
- Create sequence diagrams to illustrate the interaction between different components
- Ensure that the architecture aligns with project requirements

Week 3 & Beyond: Further Iterations

- Begin actual implementation of authentication and profile features
- Conduct unit testing on the developed modules
- Work on refining security measures and error handling
- Prepare for integration with GUI and other system components
- Continuous testing and adjustments based on feedback from team reviews

Collaboration & Integration

- Weekly sync-ups to track progress and resolve roadblocks
- Close coordination with the GUI, and matchmaking teams

- Early integration testing to avoid last-minute compatibility issues

Risks & Mitigation Strategies

- Security risks: Implement thorough testing and code reviews
- Delays in development: Set internal deadlines and review milestones regularly
- Integration challenges: Maintain clear documentation and frequent cross-team communication

Deliverables

- Use case diagrams and descriptions
- Class structure and sequence diagrams
- Fully implemented authentication & profile modules
- Unit test reports and documentation
