

Connect 4 Review Document: Use Case Descriptions / Structure Diagram

Use Case Descriptions:

The provided case descriptions are well structured and follow the proper use case format, but some areas can be improved.

Needs More Game-Specific Use Cases:

Consider adding separate use cases for key mechanics of each game, like placing a piece and checking for a win/draw in Connect 4.

More Explicit Use Cases For Each Game:

While all games do share some use cases like win-and-draw conditions, the logic behind most of them is different. It might be better to have separate cases for each game so all the unique mechanics are accounted for.

Overall, the descriptions are solid, but adding these details will improve clarity and completeness.

Structure:

From the looks of it, the Connect 4 structure diagram looks well organized and clearly structured. The methods and class names provide clarity, making everything easy to understand, and there don't seem to be any issues; overall, it's well done.
