

Kilo- GUI Wireframe Feedback

The wireframes for this project cover most necessary use cases and provide lots of details on specific games and account set up. It has very thorough wireframes for game layouts, with many in game options such as chatting, challenging friends, forfeit, and rules. Some suggestions for improvement would be:

- Include a **Logout** wireframe, as it's a necessary functionality to display.
- Add a **Manage Profile** wireframe to display how users can reset their password, manage account information, or delete their profile. It would ensure users have control over their personal data and account settings.

Implementing these changes would ensure all necessary use cases are covered in the wireframes and improve the development process.
