

Leaderboard/Matchmaking Feature Proposal Document

1. ELO Ranking Suggestions

Suggested Improvements:

- Set a minimum rating limit (like a floor ranking) after which a player's rating cannot drop further in Tic-Tac-Toe to prevent excessive demotions due to frequent draws.
 - Once a player reaches a certain rating, the K-factor should remain constant to ensure fair ranking adjustments and prevent new players from gaining an advantage over experienced players.
 - Players should not continuously lose points for unavoidable draws at high levels, maintaining a more stable and competitive ranking system.
 - These adjustments would help create a fairer ranking progression for Tic-Tac-Toe.
-

2. Use Case Descriptions & Diagram

Seasonal Leaderboards: Seasonal leaderboards keep things fresh and exciting by giving players new challenges to compete for. With each season, there's a new opportunity to climb the ranks, which keeps players engaged and coming back. It's a great way to boost competition and keep the community active. This would boost player base engagement and increase their interaction.

Matchmaking History: Being able to see your last 20 matches (or more) would make it easier to track progress and spot trends in your gameplay. A matchmaking history gives players a better sense of how they're doing over time.
